

wodtke wood-burning stove Fire SL

The height of pleasure in broadband format

- Fire SL sets the 16:9-trend to fire
- New elementary aesthetics of fire

Fire in Form - With its very large front glass, enframed by a decor glass set, Fire SL enables the prospect of fire in a 16:9 widescreen optic. Sublime elegance in new glass optic: front glass panel and base are being offered in ›black‹ as well as in ›Latte M‹ and - highly topical - in ›white‹.

And there is more than that: The firebox can be turned by 48° to the left and to the right, in order to create different perspectives according to the changing living habits during the course of the day. A clever solution: the central combustion air connector has been integrated to the rotating base.

With a nominal thermal output of 8 kW Fire SL disposes not only of the wodtke thermocontrol system that provides automatic combustion air supply but also of an internal pre-heating of a secondary air stream for low-emission combustion and the AWS window air wash system keeping the window clean for longer.

An unostentatious stove body, aluminium door handle, front glass panel and base in ›black‹, ›Latte M‹ or ›white‹: Simplicity is the guiding theme, unobtrusive elegance its credo. The desire to constantly improve the quality of firing technology leads to the development of the most innovative products associated with fire.

The creative handling of new materials, high standards in workmanship and the clearly distinct form of our products all give rise to excellent design – stoves attune to the spirit of the day – the classics of tomorrow. Here, the aesthetic vigour of fire is focussed on.
