

## wodtke **dadoo**

Tomorrow's world of wood-burning stoves!

**High Tech - High Light - High Design. With its in every sense extraordinary wood-burning stove "dadoo", wodtke allows a deep look into tomorrow's world of chimney stoves.**

"dadoo" – a wood-burning stove for heating ecologically with CO<sub>2</sub>-neutral fuel, as the center of your living environment – enchants the beholder. The - optional - innovative LED-module on the rear side allows you to choose between fixed or changing irradiation of color via convenient remote control. The emotionality evoked by the play of flames and the LED-generated lighting effects soothe the vegetative nervous system.

Another innovative feature, Comfort Lift-Up by wodtke, allows the glass firedoor to lift up elegantly and close with ease. Moreover, wodtke temperature control with an automatic combustion air duct ensures particularly low-emission combustion.

The design is simplistic. As the casing material of choice, glass profoundly enhances the organic form of the fireplace, which creates a synthesis with the soft, buoyant lines of the curved base "XL" with wood rack.

Whether soothing pastel green, cool blue-green glowing of the sea or purple sunset at the end of a day - whatever mood you're in or you want to get: with "dadoo" you can enjoy any imaginable color - together with the comfortable warmth of a wodtke wood-burning stove.
