

Trend-setting for present-day building

wodtke **easy.nrg** - the intelligent, easy-to-use power plant for the daily warmth

With its new innovative product line easy.nrg wodtke, pioneer and one of the leading manufacturers in the field of pellet stove technology for living space heating, extends its product family "wodtke.nrg".

Efficiency and sustainability

The pellet stove easy.nrg is designed as a single-room fireplace for the living area. With a nominal thermal output of 2 to 6 kW easy.nrg is intended for use in highly insulated buildings such as passive or low-energy houses. Its excellent energy efficiency and low emissions meet the coming requirements of tomorrow already today. This underlines the award of the most successful German eco label "Blue Angel". The "Blue Angel" is the hallmark of ecologically certified, high-quality products.

Another forward-looking feature is the optional room-air-independent, airtight combustion air supply duct. So, easy.nrg specifically allows installation in passive and low-energy houses with controlled room ventilation.

Prized Design

Only shortly after its market launch wodtke easy.nrg has already been awarded the renowned *Design Plus*. The expert jury of the German Design Council awarded the label "Design Plus powered by ISH" for the "outstanding and notably innovative design". As the jury pointed out, "the aspects of climate protection, energy efficiency and sustainability were of particular importance for the choice".

Qualified as "ground-breaking top performance" easy.nrg was also awarded the *Interior Innovation Award*, one of the most significant design prizes of the home furnishing industry worldwide.

What's more, the nomination for the *German Design Award 2012* is a significant success. The jury therewith underlined "that already being nominated for the German Design Award can be taken as a very special achievement for the outstanding design quality."

* General approval as room-air-independent fire place is pending.

DESIGN PLUS

Technology and Innovation

The pioneering micro-processor-controlled technology ensures a high level of efficiency. An automatic feed screw supplies the stove with pellets to maintain the desired room temperature precisely.

Ultimate ease of use and safety – implemented for example in the childproof door lock with push-on handle and the electronically monitored combustion technology – were focal aspects in the development of this stove: easy.nrg. Its use of inexpensive fuel makes for economy, and the special firebox geometry ensures efficient, low-emission combustion.

easy.nrg is characterised by low-noise operation at high efficiency throughout the whole output range. Connection facilities for BUS system, C-Box and LCD-operation board provide an up-to-date ease of use.
