

Pellet Stove with pellet storage

wodtke **ivo.tec**⁺Tower

– volume and efficiency to the max.

ivo.tec +Tower – this combination of pellet stove and pellet storage in one modular group takes home owners a further step towards having their own independent heat supply. Around 4 fillings of 190 kg wood pellets will cover the annual heat demand of a low-energy or passive house.

Connection to an external conveyor system is no longer required, and structural interventions for pellet silos or feed lines are likewise a thing of the past. Thermal output ranges optionally from 3 to 9 or from 3 to 13 kW.

The entire technology residing in a wodtke pellet stove was developed with a mind to efficient, CO₂-neutral wood pellet combustion.

With its inviting view on the flames and direct heat delivery into the room wodtke ivo.tec +Tower will add cosiness and flair to any living space. Its use of inexpensive fuel makes for economy, and the special firebox geometry ensures efficient, low-emission combustion.

wodtke's ivo.tec+Tower combination is available in the two design versions "white" and "black" decorative glass.

wodtke ivo.tec +Tower – modular heating with wood pellets.

wodtke **ivo.tec**⁺Tower – volume and efficiency to the max.

Around 4 fillings will cover the annual heat demand of a low-energy or passive house.

Easy to handle: a support plate for pellet sacks assures the convenient refilling with wood pellets.
